

Doctors of Optometry diagnose, treat and help prevent diseases and disorders affecting the eyes and visual system. We also assist in identifying general health conditions that are often first detected through an eye exam. From infants to grade-schoolers through to grandparents, Doctors of Optometry not only ensure quality of vision and eye health, but quality of life.

Ask a Doctor

Many serious eye conditions do not cause obvious symptoms such as decreased vision, pain, redness or discharge. Some eye diseases only show symptoms when the condition has advanced to a point where it is more difficult to treat, or may be irreversible. A comprehensive eye exam allows for these conditions to be detected and treated early.

Doctors of Optometry provide a full range of vision and eye health care. We are your single source for comprehensive, doctor-delivered eye care.

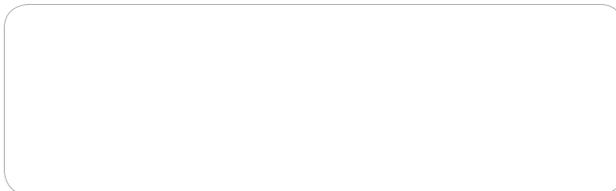

Search our website for eye-related topics including eye health, eye diseases, eye exams, children's vision problems, prevention, treatment, eyewear and more. Or ask a question about vision and eye care on our Facebook page at facebook.com/AskadoctorofOptometry.

DOCTORS OF OPTOMETRY

A single source

for all your

vision, eye health

and eyewear needs.

Healthy Eyes.
Doctor Delivered.™

™“Healthy Eyes. Doctor Delivered.” is a trademark of the British Columbia Association of Optometrists.

Healthy Eyes.
Doctor Delivered.™

Eye exams do more than determine
if you see well. They are a vital
part of your overall health.

Quality. Service. Convenience.

From vision, eye and general health needs, through to framing a change of look, no one can provide the scope of services and health care that Doctors of Optometry deliver. Our recommended treatment for patients can include prescribing medications, prescribing eyeglasses and contact lenses to correct vision, special low vision aids and eye coordination exercises. Doctors of Optometry can also refer you to specialists for advanced medical, surgical or laser treatments.

As Doctors of Optometry, we evaluate many factors that can affect your vision and eye health. We review your case history, conduct an external and internal examination of your eyes, and measure vision qualities, such as eye movements and coordination, sharpness of vision and peripheral vision. We also evaluate your ability to adjust focus, and to see colour and depth normally. If we detect problems, we may recommend glasses, contact lenses, eye exercises, medication or surgery.

In addition to prescribing glasses and contact lenses, Doctors of Optometry can recommend eye health hygiene and prescribe medications to treat infections, inflammations and allergies. We treat eye injuries, including removing foreign bodies. We assess unusual or sudden vision changes and conditions causing eye pain.

Seeing well and looking good.

Doctors of Optometry ensure your new glasses and contact lenses fit your visual and eye health needs, as well as your fashion sense. Many Doctors of Optometry offer a wide variety of eyewear styles and brands, including sunglasses and safety glasses, and ensure your glasses and contact lens prescriptions are accurately filled and the final products are professionally fit to provide optimal vision, comfort and eye health. Doctors of Optometry are uniquely qualified to ensure your eyewear meets all of your needs, providing optimal vision, comfort and eye health, as well as style.

The corrective lens prescription provided to you by your Doctor of Optometry is only one piece of information that will determine how well you'll see with your new eyewear. During the normal process of selecting and fitting your eyeglasses, your Doctor of Optometry ensures your purchase is custom-made and fit to give you clear and comfortable vision, while making sure you look great.

Doctors of Optometry recommend infants have their first eye exam between six and nine months of age. Children should have at least one eye exam between the ages of two and five, and yearly after starting school. Adults should have an eye exam every two years and seniors annually.
